

Boost young plant  
development, use as an  
organic pesticide, and  
stabilise your soil, naturally.

## Panda Biostimulant & Blue

Improves water and nutrition  
absorption, is rich in nitrogen  
and promotes growth.

## Biochar byproduct plus nitrogen = “perfect” plant science

**Panda Biostimulant** is a foliar and ground spray based on wood vinegar, a byproduct of biochar production. Panda Biostimulant accelerates the growth of targeted parts of the plant, like roots, stems, tubers, flowers and fruit and creates a stronger plant overall.

This light brown liquid contains pyroligneous acid and natural ‘plant hormone-like’ compounds. It is a powerful formula, highly effective in enhancing plant growth and yield, while increasing resistance to pests and diseases.

Say goodbye to grey moulds and mix this with hot pepper for added insecticide benefits.

With over 200 organic components, including acetic acid, Panda Bio Stimulant can also stabilise your soil PH. It is available as 20L concentrate.

**Stronger plants, greener leaves,  
better fruit.**

## Banyula Rural

### PANDA BLUE

Panda Blue is perfect for plants in the early stages of growth but can be applied any time.

Packed with 12.5% nitrogen, 1.0% phosphorus, 9.5% potassium, 3.3% zinc, 1.3% boron and 0.04% molybdenum, this formula also incorporates a super spreader/penetrant, eliminating the need for additional adjuvants.

**Panda Blue** is a foliar application which is rich in nitrogen. It strategically addresses the nutritional stresses induced by environmental and seasonal factors between flowering and nut maturity, when nutrient demand surpasses what the plant is able to gather from its roots.

For optimal results, apply Panda Blue at key growth stages: early bud emergence, early flowering, match head size, pea size, and two applications during nut maturation. It is suitable for both dry and wet weather.

Mix 2.5L per 100L of water and apply to the point of runoff, at a rate of 50L per hectare.

## Foliar Nutrition & Soil Conditioners

Banyula Rural

### Panda Foliar

Includes modified fish hydrolysate for fruit/nut development.

### Panda KR

(Kernel Recovery)

Features wood vinegar. Improves flowering and fruit/nut set

### Panda Blue

Nitrogen-rich foliar nutrition for young tree crops.

### Panda Biostimulant

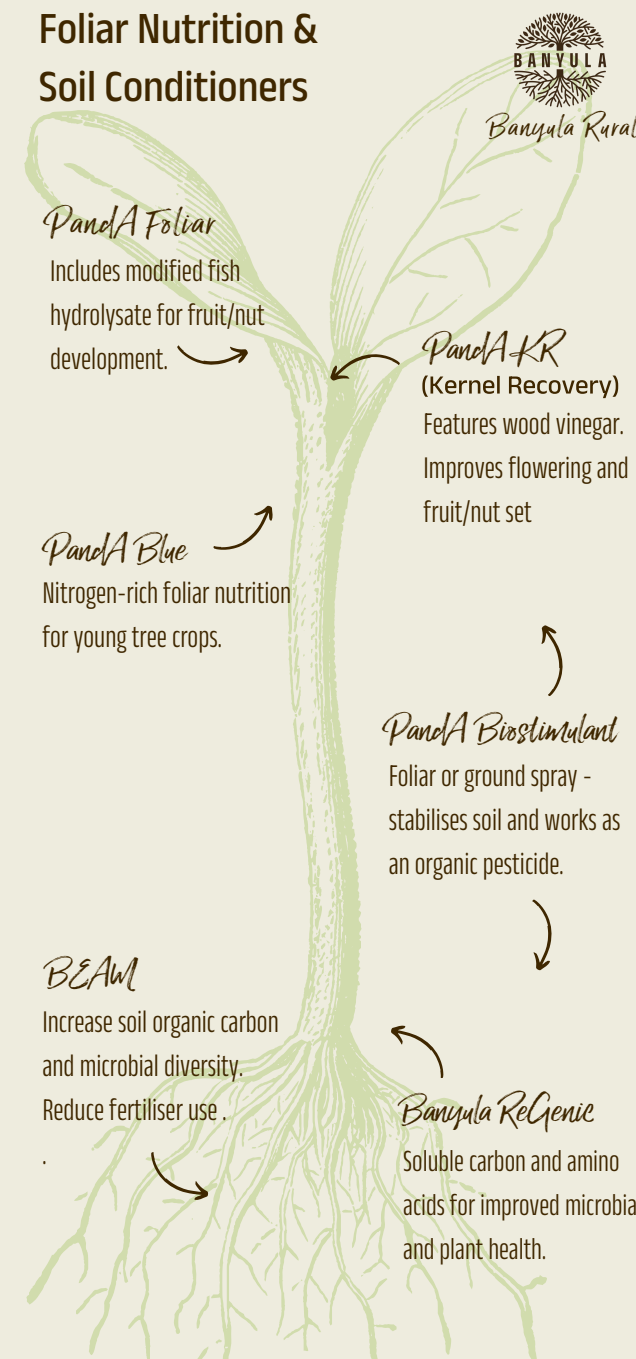

Foliar or ground spray - stabilises soil and works as an organic pesticide.

### BEAM

Increase soil organic carbon and microbial diversity. Reduce fertiliser use.

### Banyula ReGenie

Soluble carbon and amino acids for improved microbial and plant health.
