Banyula ReGenic

Highly soluble carbon

ReGenic - It's soil regeneration 'magic'

Banyula ReGenic initiates the restoration of depleted soils through the provision of soluble carbon and amino acids. It improves plant health, yield and quality, by feeding and enriching the soil microbiome.

Providing food for your good fungus and bacteria, ReGenic is a brilliant companion product to BEAM which increases the microbial diversity of your soil.

When applied together ReGenic feeds BEAM, right at the time it is most needed, making it highly effective.

More reward for less effort.

BANYULA REGENIC APPLICATION

Apply directly, diluting 20L of ReGenic with 500-600L of water per hectare. Apply to lower trunk and within 50cm of the trunk line. In horticultural crops apply over root zone.

Water where possible and apply 4-5 times a year if required.

When mixing with BEAM the application rate is 15-20L per hectare.

Foliar Nutrition & Soil Conditioners

PandA Foliar

Includes modified fish hydrolysate for fruit/nut development.

PandA KR (Kernel Recovery)

Features wood vinegar. Improves flowering and fruit/nut set

PandA Blue

Nitrogen-rich foliar nutrition for young tree crops.

PandA Biostimulant

Foliar or ground spray - stabilises soil and works as an organic pesticide.

BEAM

Increase soil organic carbon and microbial diversity. Reduce fertiliser use.

Banyula ReGenic

Soluble carbon and amino acids for improved microbial and plant health.
