PandA-Foliar Product User Guide

Product Overview

PandA-Foliar is a modified fish protein hydrolysate designed to enhance the yields and kernel recovery of macadamia nuts, as well as support fruit development and maturity in avocados, macadamia, and bananas. It is specially formulated to address transient nutrient deficiencies, such as Boron, during the crucial period between flowering and nut maturation. PandA-Foliar contains essential amino acids, 4.0% Nitrogen, 5.25% Boron, 0.7% Zinc, 0.02% Molybdenum, and 5.0% super spreader/penetrant.

Product Application

PandA-Foliar is available in two sizes: 20L and 1000L Intermediate Bulk Containers (IBCs). It is recommended for use in nut filling, fruit development, and maturity stages of the specified crops (avocados, macadamia, and bananas). The critical application rate is 400ml per 100L of water, which equates to 8L per hectare (2000L/ha). The foliar spray should be applied "to the point of run-off" every 4 weeks, starting from the pea size nut set and continuing until nut maturation. For optimum results, at least 3 applications are recommended during the growing season.

Safety Precautions

- Keep PandA-Foliar out of the reach of children.
- Avoid contact with eyes and skin. In case of contact, rinse with plenty of water.
- After handling the product, wash hands thoroughly.
- While using PandA-Foliar, refrain from eating, drinking, or smoking.

Storage and Handling

Banyula Operations Pty. Ltd., incorporating O'Grady Rural, produces PandA-Foliar. They have no control over the handling and storing of the product. As such, they provide no express or implied representation or warranty. Users assume all risk in the handling and application of the product and the results obtained from its use.

Application Instructions

- Measure the required quantity of PandA-Foliar based on the recommended application rate.
- Mix the measured quantity with the appropriate amount of water in a spray tank.
- Stir or agitate the mixture thoroughly to ensure even distribution of the product.
- Apply the PandA-Foliar foliar spray to the target crops using suitable spraying equipment.
- Ensure complete coverage of the crop's foliage but avoid excessive runoff.

- Apply PandA-Foliar every 4 weeks, starting from pea size nut set until nut maturation, with at least 3 applications during the growing season.

Crop-Specific Usage

- **Avocados:** Apply PandA-Foliar at the recommended rate during the nut filling, fruit development, and maturity stages.
- **Macadamia:** Apply PandA-Foliar at the recommended rate during the fruit development, and maturity stages to quality and yield.
- **Banana:** Apply PandA-Foliar at the recommended rate during the fruit development, to enhance yields and fruit quality.

Analysis

- Modified fish protein hydrolysate: Contains essential amino acids.
- Nitrogen: 4.0%
- Boron: 5.25%
- Zinc: 0.7%
- Molybdenum: 0.02%
- Super spreader/penetrant: 5.0%

For any further information or inquiries, please contact Banyula Operations Pty. Ltd. at the following:

- **Address:** 813 Booyong Road, BOOYONG NSW 2480
- **Mobile:** 0410 064 465
- **Email:** sales@ogradyrural.au

Please note that the provided information is subject to change, and it is essential to follow the instructions and recommendations provided on the product label. Always adhere to local regulations and guidelines while using PandA-Foliar.

General Tips:

- Always read and follow the product labels and instructions carefully.
- Store all products in a cool, dry place, away from direct sunlight and moisture.
- Keep products out of reach of children and pets.
- In case of any questions or concerns, feel free to contact our customer support team.

We wish you a successful and bountiful harvest! Happy farming!
